

Page 1: Photosynthesis Overview

Chlorophyll absorbs light energy in the thylakoid membrane.

The Calvin cycle fixes CO₂ into glucose using ATP and NADPH.

Page 2: Photosynthesis Overview

Chlorophyll absorbs light energy in the thylakoid membrane.

The Calvin cycle fixes CO₂ into glucose using ATP and NADPH.

Page 3: Photosynthesis Overview

Chlorophyll absorbs light energy in the thylakoid membrane.

The Calvin cycle fixes CO₂ into glucose using ATP and NADPH.
